

## What is JoikuSpot?

JoikuSpot is an award winning software that turns the mobile phone into a secured WLAN internet gateway. It shares the phones 3G internet connection over WLAN to external devices such as laptops, iPods and internet tablets.

Devices can now securely connect to internet via mobile phone.

## How does JoikuSpot work?

As JoikuSpot is software based, no cables or additional hardware are needed to establish the internet connection.

You can replace USB Dongles and Bluetooth or Cable connectivity with JoikuSpot software since it installs directly to your mobile phone, transforming a mobile phone into a secured WLAN internet gateway.

Multiple WLAN devices can connect to internet in parallel through one JoikuSpot access point. The phone owner is though in full control of who gets to access internet through his JoikuSpot.

You need just 2 simple steps to use JoikuSpot:

1. Click JoikuSpot-logo on your device. JoikuSpot will start and in few seconds it is a working WLAN HotSpot.
2. Open your pc's network connections and select JoikuSpot as your wireless network connection.

Now you are ready to get to internet.

We recommend unlimited mobile data plans for cost-efficient use of JoikuSpot mobile WLAN HotSpot. With unlimited high speed mobile data plan, you enjoy an instant and fast internet access everywhere with their laptops, using their mobile phone's 3G data connection as an internet gateway.

Premium Edition comes with VPN and EMAIL support, so your employees can connect securely to your corporate intraweb and email.

## JoikuSpot benefits

1. Single payment per phone (no 24 month commitments)
2. No additional USB dongles or cables to remember and carry
3. Multilanguage support (language is automatically selected to be the same as the phone's language)
4. Number of external devices can share the same connection, if allowed
5. HTTP(S) protocol support
6. WLAN access to internet with laptops, iPods and internet tablets
7. Secured access and user control
8. Secured access to corporate intranet (VPN)
9. Email protocol support
10. Full support for all network access protocols

JoikuSpot can be customized for operator needs:

1. Brand, naming and languages
2. network access point settings
3. access point naming
4. default landing pages
5. security level definition
6. battery threshold warnings
7. IMSI restrictions to allow functioning in operators network only

JoikuSpot Premium supports French, Dutch, Portuguese, Danish, Norwegian, Chinese, Japanese, Spanish, German, Italian, Finnish, English and Swedish.

JoikuSpot is designed for Nokia S60 3<sup>rd</sup> Edition and 5.0 generation phones.
